

LEVER ON BACKPLATE

- Locate the spindle through the square hole in the latch or lock and place the backplates onto the spindle each side of the door.
- Mark screw holes with a bradawl.
- Remove backplates and spindle.
- Drill pilot holes for woodscrews.
- Fit backplate locating spindle through the square hole in the latch/lock follower ensuring enough projection of spindle on either side.
- Tighten grub screws where applicable to secure spindle.
- Screw wood screws in place when aligned.
- Ensure door is fitted with correct mortice lock with 57mm centres.
