

Rising Butt Hinge (Left Hand)

IRB076EBLH/BP

Rising butt hinge left hand version. Rising butt hinges are used to aid doors to self close in such environments as bathroom cubicles. As the door is opened the door rides up the spiral knuckle raising the door as it opens. When the door is released the weight of the door combined with the bevel on the hinged joint causes the door to close by itself in the majority of cases, although this action is not entirely reliable.
