

## Fitting Jig for Ceam Hinges 1129 & 1130

Fitting Jig for the 1129 & 1130 Ceam 3D concealed hinge.

The drilling template, made of 5 mm thick aluminium plates, is composed by a central body and a double insert (sold separately from the body); it allows the implementation of the slots for all the invisible hinges. The strength of the materials guarantees precise slots executions with a manual pantograph (**16 mm** diam. cutter and **27 mm** external ring provided for all manual pantographs).
